Pixel-perfect reports created with SAP Crystal Solutions for small to midsize business
Create the exact report you need in a pixel-perfect format

Analyzing your business is getting more complex every day, as the quantity of data to process, the speed at which new data becomes available and the number of relevant data sources to consider has strongly increased.

At the same time, users have changed their expectation about the quality of the documents they receive. Reports need to look professional, fit company design standards and contain trusted data that can be shared in a secured way.

On top of that, each report recipient wants a more personalized experience in order to save time and focus on what is essential for him or her.

SAP Crystal Reports, the de facto standard in reporting can help you with it. This software continues a two-decade tradition of excellence in providing powerful, user-friendly, and dynamic reporting functionality.
SAP Crystal solutions are developed for the creation of pixel-perfect documents for small to midsize companies.

1. Design interface
2. External-facing documents
3. Pre-formatted reports
4. Financial documents
5. Published documents
6. Operational reports
1 Design interface

- Standard icon design allows for quick learning
- Report explorer permits easy navigation
- Create your report in sections, like for desktop publishing
- User interface is available in 20 languages
2 External-facing documents

- Add personalized charts for each individual recipient
- Use your corporate look and feel
- Leverage barcode integration capabilities
- Add shipping information from your database
Pre-formatted reports

- Fill the data directly from your database
- Recreate an official form in a pixel-perfect manner
- Use parameters to save time and increase accuracy
Create your monthly financial report with a click

See all measures and dimensions used in the report

Export reports to Adobe PDF, MS Excel, .csv, or text
5 Published documents

- Personalize your flyers directly from your database
- Display dynamic pictures in your reports
- Print documents from postcard to poster size
- Add multiple tables or charts to a single document
Operational reports

Automate administrative tasks

Create your report with multiple pages in a single design

Save instances for archiving, reference or distribution

Schedule reports to run based on events
